4/18/2023	Phone	Hello. My name is [Name Redacted]. My phone number is [Phone Number Redacted]. My suggestion about the bridge, I understand is that the location is adjacent to the existing spans and they want to put a new span in. My suggestion is they consider putting a double-decker span in so that would double the amount of access and possibly even make one of the levels commercial traffic only. In addition, depending on much space they have to work with they even could consider putting in a light rail span for commuter traffic to access. So that's my suggestion. Hope it works. But get bigger bang for your buck with multi levels. Look the George Washington Bridge in New York City. Multi levels work. We are not in a earthquake zone so it should be fairly stable. Thank you very much. Good Bye.
