

Provide Adequate Capacity: Traffic Forecasts

2040 Summer Weekend Average Daily Traffic

2040 Non-Summer Weekday Average Daily Traffic

In summary:

- Ideally, the future volumes would be LOWER than the existing (2017) volumes at the existing Bay Bridge. Corridor 7 provides the most congestion relief.
- On Summer Weekends, Corridors 5, 6, 7, 8 and 9 are the only corridors that reduce volumes on the Bay Bridge to below existing (2017) levels.
- On Non-Summer Weekdays, Corridors 7 and 8 are the only corridors that reduce volumes on the Bay Bridge to below existing (2017) levels.
- Corridors 5, 6, 7, 8, and 9 were carried forward for additional screening to determine if they met the remaining project needs.
